

BOMs in Excel. Work orders on paper. True product cost unknown until month-end.

Softype turns disconnected production, inventory, and financial systems into one trusted view of your manufacturing operation, so you can cost any product, track any work order, and make decisions with numbers you trust.

We don't sell software. We sell the end of the anxiety of not knowing.

Your bills of materials live in spreadsheets. Work orders are tracked on paper or email. Labor is allocated manually, averaged across production, not captured against specific jobs. Inventory valuation depends on periodic counts. Month-end close drags because production and accounting live in different systems. When leadership asks "what does it actually cost to make this product?" the answer takes days and no one fully trusts it.

Your production floor is strong. Your teams deliver. But your systems weren't built for manufacturing at this scale.

WHAT CHANGES WHEN YOU WORK WITH US

True product cost in real time

Materials, labor, and overhead tracked against specific work orders. Actual vs. standard cost visible per unit, per product line, without manual reconciliation.

BOMs and work orders inside the ERP

Multi-level BOMs with revision control, linked to inventory and purchasing. Work orders tracked from release through completion with WIP visibility at every stage.

Production and finance connected

Every production transaction flows directly into the general ledger. Month-end close becomes a verification step, not a data assembly project.

Demand-driven planning

MRP generates material requirements and production schedules from demand signals. Seasonal spikes and large orders planned against real capacity and inventory, not managed reactively.

YOUR SOFTYPE ASSEMBLY MANUFACTURING STACK

NetSuite SuiteSuccess Manufacturing Edition

Core ERP: financials, inventory, procurement, CRM, reporting, dashboards. Work Orders and Assemblies for BOM management, assembly builds, and component backflushing.

Manufacturing WIP & Routing

Multi-stage assembly visibility: track work-in-progress by production stage, work center, and cost category. Routing for multi-step production processes.

Advanced Inventory Management

Multi-location inventory with demand planning, reorder points, lot/serial tracking, and real-time stock visibility across all warehouses and production stages.

Scout by Softype

Read-only AI assessment of your NetSuite environment. Identifies complexity, risk, and inefficiency. Produces a clear optimization roadmap, without disruption.

SuiteExtensions: GoApprove

Multi-level approval workflows for purchase orders, production changes, and expense reports.

SuiteExtensions: GoBudget

Production and department-level budget control. Real-time budget vs. actual tracking with alerts before overspend happens.

SuiteExtensions: GoProcure

Procurement automation: requisitions, approvals, and PO generation linked to production demand and material requirements.

24/7 BAU Support

Post go-live partnership: health checks, optimization, training, and a named support team who knows your operation.
