

Recipes in spreadsheets. Batch costs assembled after the fact. One recall away from crisis.

Softype turns disconnected production, quality, and financial systems into one trusted view of your food operation, so you can trace any batch, cost any product, and pass any audit with confidence.

We don't sell software. We sell the end of the anxiety of not knowing.

Your recipes live in Excel. Batch costing happens after the fact. Lot traceability depends on paper logs. Yield and waste are measured, if at all, at aggregate level. FDA or BFAD auditors arrive and your team scrambles to assemble documentation from multiple systems. Meanwhile, seasonal raw material prices shift and you can't see the margin impact until month-end.

Your teams are strong. Your products are in demand. But your systems weren't built for the complexity of regulated, perishable, process manufacturing.

WHAT CHANGES WHEN YOU WORK WITH US

One system from recipe to ledger

Production, inventory, quality, and finance connected on one platform. Every batch, every ingredient, every cost, visible and traceable.

Batch cost known in real time

Recipe-level costing including ingredients, labor, packaging, waste, and overhead. No more assembling the number after the fact.

Recall-ready in hours, not days

Bi-directional lot traceability: trace any ingredient forward to finished goods or backward to its source instantly. FEFO enforcement across all locations.

Audit confidence built in

HACCP inspection points integrated into production routings. Quality data collected automatically. Audit reports generated on demand.

YOUR SOFTYPE CONSTRUCTION STACK

NetSuite SuiteSuccess Manufacturing Edition

Core ERP: financials, inventory, procurement, CRM, reporting, dashboards. Configured for food and process manufacturing.

FernSpeed (Partner, Built for NetSuite)

Recipe management with versioning, catch-weight/dual-unit handling, yield and waste tracking, HACCP compliance, production planning, and food costing. Purpose-built for food and beverage. Native inside NetSuite.

Scout by Softype

Read-only AI assessment of your NetSuite environment. Identifies complexity, risk, and inefficiency. Produces a clear optimization roadmap, without disruption.

SuiteExtensions: GoApprove

Multi-level approval workflows for production orders, raw material purchases, and expense reports.

SuiteExtensions: GoBudget

Production budget control. Real-time budget vs. actual tracking with alerts before overspend happens.

SuiteExtensions: GoProcure

Procurement automation: requisitions, approvals, and PO generation linked to production demand and raw material requirements.

24/7 BAU Support

Post go-live partnership: health checks, optimization, training, and a named support team who knows your operation.

WHY SOFTYPE

26	600+	100+	25+	4
YEARS	PROJECTS	TEAM	COUNTRIES	OFFICES

The confidence to decide. The certainty to act.
